

How Does Snow Form?

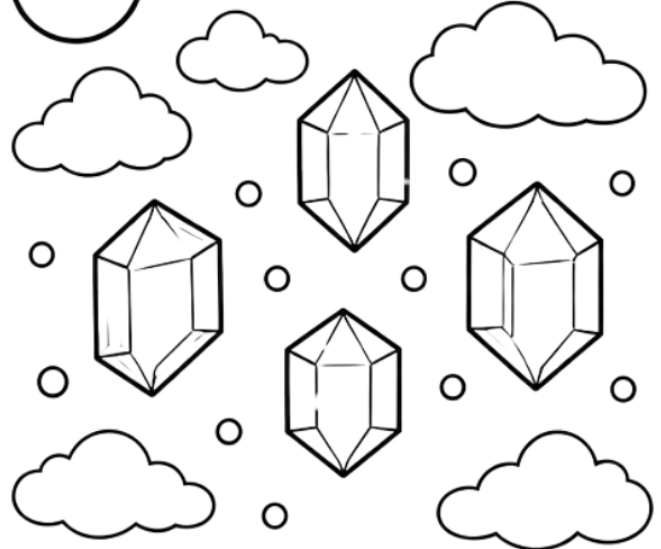

Can you follow the steps and number them from 1 to 4 to show how snow forms?

Tiny water droplets in clouds

Warm, moist air rises and cools. Water vapor changes into tiny water droplets in clouds.

Ice crystals form

When it gets very cold, the water droplets freeze into tiny ice crystals.

Snowflakes grow

The ice crystals stick together and grow into beautiful snowflakes.

Snow falls to the ground

When the snowflakes become heavy, they fall from the clouds to the ground as snow.
